

Replication material for Why Do Some Organizations Kill While Others Do Not: An Examination of Middle Eastern Organizations forthcoming in Foreign Policy Analysis (Victor Asal, Marcus Schulzke and Amy Pate)

Please direct questions to Victor Asal vasal@albany.edu

Introduction

This document describes the data used in the paper “Why Do Some Organizations Kill While Others Do Not: An Examination of Middle Eastern Organizations.” If you use this data please cite the article:

Asal, Victor, Marcus Schulzke and Amy Pate Forthcoming "Why Do Some Organizations Kill While Others Do Not: An Examination of Middle Eastern Organizations" *Foreign Policy Analysis*

The material related to this replication document are a Stata file of the Political Organizations Behavior data (POD) database and the codebook.

Data

The Political Organization Behavior Data (POD) database includes a sample of 60 extremist organizations across a variety of ideologies and countries in the Middle East and North Africa gathered at the organizational year level of analysis for the years 1995-2004. All data was collected at the National Consortium for the Study of Terrorism and Responses to Terrorism (START) center at the University of Maryland. This material is based upon work supported by the Science and Technology directorate of the U.S. Department of Homeland Security under Grant Award Numbers N00140510629 and 2008-ST-061-ST0004, made to the National Consortium for the Study of Terrorism and Responses to Terrorism (www.start.umd.edu). The views and conclusions contained in this document are those of the authors and should not be interpreted as necessarily representing the official policies, either expressed or implied, of the U.S. Department of Homeland Security or START.

Selection criteria for organizations – taken from article

We focused on organizations with extremist religious, ethnic, leftist, or rightist ideologies (defined below). Our sample covers the years 1995-2004, with data from 15 countries and 60 organizations generating 467 organizational years in our sample. All organizations, in order to be eligible for inclusion, had to meet the following criteria:

- The organization must be political in its activities
- The organization should be broader in its political activities/goals than a single-issue organization
- The organization must be active for 3 or more consecutive years between 1995 and 2004

- The organization must have more than merely local (city-level) operations and/or goals and some non-virtual activities
- The organization must have decision-making capacity independent of any government

Religiously based political organizations are characterized by the following:

- have ideologies derived from religious sources; and
- seek sociopolitical change in order to transform societies in congruence with religious precepts.

Ethnically based organizations are characterized by the following:

- claim to represent an ethnic minority within the state; and/or
- have membership which comes primarily from an ethnic minority; and/or
- advocate for autonomy or independence for that ethnic minority.

Far right groups included have one or more of the following ideological components guiding political beliefs and actions:

- racism (may be explicit or symbolic);
- xenophobia/anti-immigrant component;
- nationalistic chauvinism(majority group nationalism);
- socio-cultural authoritarianism (law and order, family values); and/or
- anti-Semitism/anti-Zionism/negationism.

Left-wing groups included have one or more of the following ideological components guiding political beliefs and actions:

- social justice as dominant value;
- radical critiques of capitalist market economy; and/or
- internationalism (cosmopolitanism, multiculturalism, international solidarity).

Sources such as academic books, journal articles, newspaper articles, and government reports were consulted to build the list of organizations meeting the above criteria. A total of 157 organizations were found to meet the criteria, broken down as described in Table 1.

Table 1

<i>Ideology</i>	<i>Organizations meeting criteria (percentage of total number)</i>	<i>Number that use violence (percentage)</i>	<i>Number that do not use violence (percentage)</i>
Religious	89 (58%)	54 (61%)	35 (39%)
Ethnic	40 (25%)	20 (50%)	20 (50%)
Rightist	8 (5%)	2 (25%)	6 (75%)
Leftist	20 (13%)	6 (30%)	14 (70%)

The research team collected data on a sample of 60 organizations. The sample was designed to reflect the overall distribution of the organizations above, but within each category, the sampling was randomized. The final distribution of organizations is described in Table 2.

Table 2

<i>Ideology</i>	<i>Total coded</i>	<i>Violent coded</i>	<i>Nonviolent coded</i>
Religious	34	21	13
Ethnic	15	8	7
Rightist	3	1	2
Leftist	8	2	6

The data for the analysis is included in the Stata file and all variables are described in the codebook except for the one's listed below which were created specifically for the analysis in this paper.

- `general` - generated from the variable `orglocv` (1/3=1, 0 otherwise). The variable captures if the organization was engaged in violence in any particular year
- `fowardgeneral` - generated from the variable `general`. It lags the general variable forward such that if an organization uses violence in 2003 this variable will align that occurrence with all the other data from the year 2002.
- `boundries` - generated from the variable `orgdomgoals` such that it is coded as a 1 if `orgdomgoals==4`, otherwise it is coded as zero.
- `statesystem`- generated from the variable `orgdomgoals` such that it is coded as a 1 if `orgdomgoals==5`, otherwise it is coded as zero.
- `ORGLOCwzero` -generated from the variable `orgloc` such that it is coded as a 0 if `orgloc` is coded as 1, as a 1 if `orgloc` is coded as 2, as a 2 if `orgloc` is coded as 3.

Regression and probabilities

Below are the regression and probabilities with the probabilities generated using the `prchange` command in Stata. A robustness check using the `xi:` command in Stata is also included below the `prchange` output.
